

SECURITY TRAINING

San Antonio, Texas
May 21, 2026
Lunch Included

MAY 21 **Trilogy T2 Installation and Programming**
May 21, 2026 - 8:30 am to 12:30 pm | \$0 | 4 CEU's

This course will cover the entire extended line of Alarm Lock T2 locks. The extended line includes the cylindrical, cylindrical with LockDown, double sided cylindrical, mortise, exit trim and narrow stile. Product specifications will be covered as well as how to properly install each specific lock type.

Programming of the T2 locks will be covered including changing the master code, adding manager pin codes, adding/deleting/changing user pin codes and some of the lesser known features of the lock.

The following lock models will be discussed: DL2700, DL2700LD, DL5200, DL2700CR/DB, ETDL27, DL1200 and DL1200ET.

MAY 21 **MVP Access Cloud Based Access Control**
May 21, 2026 - 1:00 pm to 5:00 pm | \$0 | 4 CEU's

This course will introduce security professionals to cloud-based MVP Access. MVP does not require on-premise software. Access to the cloud software allows users to see real time reporting of events and full control of the system. MVP is enterprise level software and is ACaaS (Access Control as a Service). This ACaaS gives the dealer RMR (Recurring Monthly Revenue).

MVP is a fee-based system with a low cost per door/reader. Along with video integration, this system allows security professionals the ability to offer their customer everything they need to security their property. MVP allows for utilization of the Alarm Lock wireless locks as well as hardwired panels for true versatility.

The security professional will need to set themselves up as a dealer on the NAPCO Comnet website. Topics covered will include gateway enrollment, expander discovery and lock discovery as well as the basics of the software. The MVP phone App will also be covered, which includes free mobile credentials.
