

Residential and Commercial Keys

The 4-Sided Jaws help you grip an optimum number of varying keyways. You'll be able to cut all of your standard keys quickly with our high-speed, single-angle cutter or the standard HPC cutters that you already use on your 1200CMB Blitz and 1200MAX CodeMax.

Angle Cuts

One of the amazing parts of the TigerSHARK2's versatility is the rotating head that generates high-security angle cuts, like Medeco. This is a revolutionary addition to the now common double-cutter key machines.

Double-Sided Automotive

Make quick work of all of your standard double-sided automotive keys. Gone are the days of having to flip over these standard blanks to cut the second side. You'll be impressed at how fast and accurate you can cut these keys.

High-Security Automotive

Decode and create High-Security Automotive Keys or cut new keys by code. The easy-to-navigate touch-screen is loaded with graphics that show you exactly how to gauge your keys so that these high-profit keys can be cut quickly and accurately.

Tubular Keys and Tibbe Keys

Don't tell your customers that you can't cut these keys. If you can't cut tubular or Tibbe keys, where are your customers going to go? More importantly, will your customers come back?

Engraver

Don't settle for stamped letters and numbers of differing depths on a crooked line. Add your phone number, codes, or even a logo onto your keys to keep your customers coming back.

Customization

Want to do something special? Create your own custom Depth and Space Data Entries to satisfy the special needs of your customers. Then tie them to your onboard customer database so that their keys are always just a couple of clicks away.

Search

Scan the extensive code database for the biting that you need, and cut that key. Search by Commercial, Residential, Automotive, Motorcycle, and more. Plus, search by key blank or multiple key machine depth and space identification number.

Decoder

Decode residential and commercial keys. Even decode Medeco. The specially designed decoding probe not only detects depths but reads angles as well. The machine detects the exact position of your blanks before cutting and ensures accurate keys and satisfied customers.

Vanity Mirror

The cutting area is mirror-backed and illuminated for ease of loading. The Jaw Assemblies quickly slide in and out and lock into place, giving you the ability to cut a larger variety of keys. The flexible arm allows you to position the touch-screen in countless ways for optimal viewing and operating. The TigerSHARK2 is loaded with too many special features to list.
