

DELAYED EGRESS MAGLOCK KIT

UL Listed All-In-One Kit With Maglock, Sounder And Keyswitch

BEA's Delayed Egress Maglock Kit is a user friendly security solution for outswinging perimeter doors. The system meets a variety of building, fire and life safety codes.

A 1200 lb., pressure-sensing maglock is coupled with a keyswitch and sounder to create an easy-to-install solution that controls and monitors door access.

The keyswitch can be positioned in a convenient location to create authorized personnel access.

- Built-in "sensor" detects when pressure is applied to outward swinging doors
- Field selectable to meet a variety of building codes
- Auto sensing voltage from 12 - 24 VDC power input
- Kit includes keyswitch for reset/override and an external sounder
- Built-in Security Condition Sensor (SCS) feature indicates that the door is closed and bonded via red/green LED door status panel
- UL 294 listed
