

# ANTIMICROBIAL AND NO TOUCH SOLUTIONS

With each and every interaction throughout the day, the products we use can be exposed to bacteria and viruses. Adding door hardware with an antimicrobial coating or offering no touch openings can make a big difference by inhibiting the growth of bacteria in these high-touch areas. By doing this, you will enhance user experiences, accessibility and increase customer traffic in your facility.

Below are a few effective solutions to help prevent contamination from viruses and germs.

Antimicrobial  
Cylindrical Levers

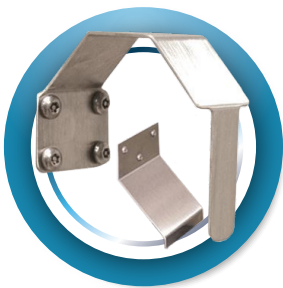

Solid Copper-based  
Alloy Push/Pull Bars

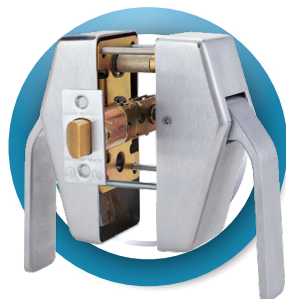

Wave to Open And  
Motion Sensors

Low Voltage  
Auto Operators

Arm & Foot Operated  
Door Opener

Antimicrobial  
Push/Pull Hardware

No Key Access  
Control Entrance

Residential Microban  
Hardware
