Auto-Bolt Max

Maximum Forced Entry Protection

Securing The Door Each Time It Closes

The AUTO-BOLT MAX offers maximum protection against break-ins combined with a simple unlock action. As with all Securitech locking products, it is fully compatible with standard, specialized high-security, removable core and restricted key systems using mortise cylinders. The optional electric release integrates with all access control systems and available in surface and concealed vertical rod.

Four Point Deadbolt Projection Against Break-Ins

- Instant deadbolt locking each time the door closes
- Stainless steel deadbolts project 1 full inch
- The door is bolted to the frame; three positions on the lock edge, and one on the hinge edge
- Stainless steel thru-bolt plates enhance forced-entry resistance
- No bolt projects into the saddle, reducing maintenance requirements and ensuring durability

Durability & Vandal Resistance

- Tested for over 1 million cycles
- Stainless steel lock body and internal parts
- Stainless steel breakaway slip-clutch lever
- Lower bolt projects into the frame, eliminating hole in the floor

Full Access Control Integration

- Electrical Release
- Request-To-Exit Signal
- Door Position Switch
- Bolt Position Switch
- Key Usage Switch

Complete Code Compliance

- Depressing the interior lever seamlessly retracts all three bolts simultaneously
- Meets ADA requirements for single motion exiting
- Easy one-motion entry by key or via access control system (on electric models)
